

DEVELOP™

TABLE BASES

E-BASES: FIXED, FOLDING & FLIP-TOP

Its timeless form makes Develop's E-Base an intelligent choice for any workspace. The tubular steel legs and columns are precisely cut and brazed for a look of seamless strength that is only enhanced by the optional chrome finish.

In addition to the corrosion-resistant duplex chrome finish, all E-Bases are available in dozens of powder-coat colors. This paint process fuses and oven-cures the coating, making it impervious to scratches and scuffs.

To protect the rest of your space, E-Bases also come standard with adjustable nylon-tipped glides under the legs, which can be upgraded to self-leveling glides for total stability on uneven surfaces.

Multiple sizes of T-leg and TT-leg fixed bases suit a variety of traditional table shapes and purposes, but casual spaces especially benefit from X-legs in two column diameters. Regardless of the style you choose, 14-gauge steel makes sure that it will last.

Folding-leg models are designed with the same sturdy components as the fixed-top bases, and snap firmly in the fully open position for security and stability. In the closed position, the legs fold tightly against the tabletop for compact storage. An optional bumper protects tabletops from dings and scratches when they are stacked.

Develop's E-Bases are also available with flip-top mechanisms that are spring-loaded for easy use, while a locking device provides secure vertical storage. Folding bases are available in multiple sizes of T-and TT-legs, while flip-top models come in X-leg and T-leg configurations. Both are great choices for multipurpose rooms.

Whether in conference rooms, offices, or workspaces, the simplicity and high-quality craftsmanship of E-Bases bring form and function to your work environments.

Glide - Adjustable nylon-tipped glides resist marring on tile or vinyl flooring. Self-leveling guides are also available.

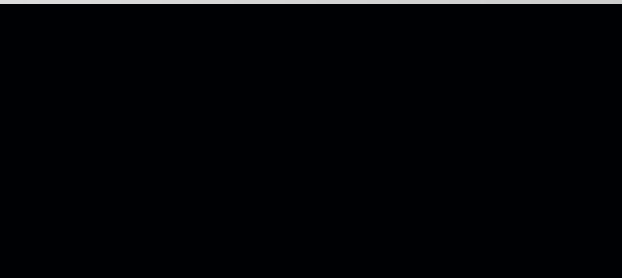

E-Base - A circular base and clean, brazed joints are the hallmark of the E-Base series.

Gangers - Secure tables into any desired configuration with these easy-to-operate gangers.

Folding Leg - T- and TT-legs can be ordered with a folding option. T-legs can also be ordered with a flip-top for more storage options.

Instead of conventional round tubes, Develop's P-Bases feature elliptical legs for a touch of contemporary elegance. Poly end caps and column caps in a variety of colors elevate these bases from a supporting role and make them part of the décor.

T-leg and TT-leg configurations are each available in two sizes. X-legs can also be specified in two different sizes to suit a variety of table tops. Strong 14-gauge steel components make every option a durable one. Adjustable nylon-tipped glides are standard on all models to protect your flooring.

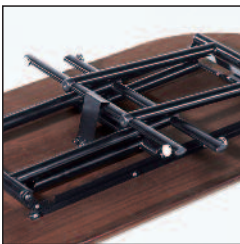

P-Bases are available in duplex nickel chrome or dozens of powder-coated epoxy colors, fused and cured to form a smooth, scratch-, scuff-, and chemical-resistant finish.

Make a mark on your workspace economically without sacrificing strength or durability. Let Develop's P-Bases take the lead in your design.

Don't let the clean lines and subtle curves of the P-Base elliptical leg fool you. These flip-top and folding bases are just as hard-working as the rest of the family, they just keep a lower profile at the end of the day.

The folding legs of P-table bases snap securely into place to prevent shifting in storage. Optional hinge bumpers protect other tabletops from scratches whether they are stacked vertically or horizontally. Flip-top models are designed with a locking mechanism that lets you easily and safely vertically store one table or several.

Folding bases are available in two sizes of T-legs and TT-legs, while flip-top models are available in two sizes of X-legs and T-legs. Both are ready to work as hard as you are and look great doing it.

Folding Base Mechanism -
The leg locking plate holds the legs in a secure position when the table is folded.

Cable Management -
Tables have the option of cable management systems. A black velcro harness attaches along the table base to clearly route cables.

P-BASES: FIXED, FOLDING & FLIP-TOP

Power/Data Module - Each module has one duplex receptacle (2 power outlets) and 2 readily accessible data ports and can be attached to any Develop table.

Flip-Top - Flip-top tables allow for easy storage.

T-BASES: FIXED, FOLDING & FLIP-TOP

Great design. Great function. Develop's T-Base tables provide a contemporary look and offer multiple design options. Arrange tables in traditional, linear layouts or innovative configurations. With square, round, rectangular, and trapezoidal models, you have incredible options with T-Bases.

Standard height is 29 inches. Modesty panels are available with the standard folding mechanism or quick release. PowerUp® is an option that allows for easy access to power and data; a vital feature in today's computer-intensive business environment.

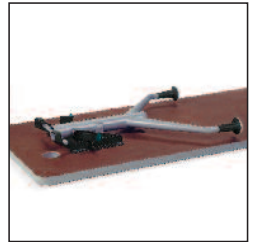

Folding leg tables feature seam-welded tubular steel legs that quickly fold flat within the frame for easy storage. Legs are equipped with a safety lock to prevent accidental movement.

Odds are your storage space is limited. We understand. That's why we created flip-top tables. With these versatile tables, you can maximize your limited storage space and transport tables with ease.

Adjustable, distinctive glides complement the unique leg profile and set the line apart. You can also choose durable, smooth casters. The angled profile of the leg is a significant departure from traditional "floor-hugging" bases. This new design direction extends beyond the base. Outstanding functionality. Superior design. And, reasonably priced. With Develop's T-Bases, you'll look at tables like you never have before.

Modesty Panels - are available as an option on many of the rectangular shaped tables. Available in a folding or quick-release option.

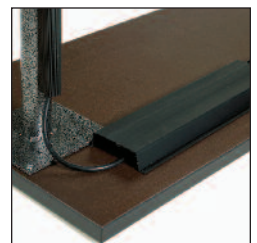

Folding Mechanism - Built of 11-gauge, black zinc finish steel, legs fold tightly to table bottom and securely lock with two polypropylene clips.

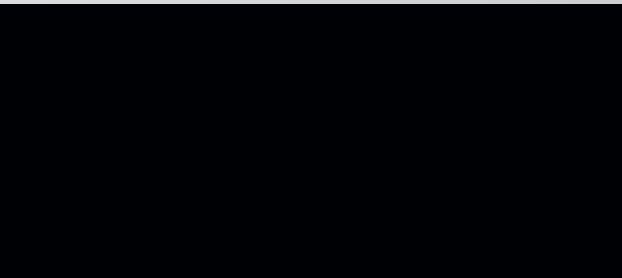

Flip-Top Mechanism - All T-Base flip-top tables can be nested for efficient storage of multiple tables.

Leg Wireway - Assists in running wires vertically down the leg to the floor.

Wire Management - A wire management trough is available to discretely hide and direct wires underneath the table.

A-BASES

For thousands of years columns have been denoted places of gathering, where socialization and the exchange of ideas were encouraged. While there is no mistaking Develop's A-Table Bases for relics, their simple shapes are sure to make them instant classics.

Available in a 29" standard seating height as well as a 42" café height, A-Bases can be used to add depth and visual interest to community spaces and casual gathering areas.

Contemporary steel columns in 3", 4", and 5-1/2" diameters can accommodate tabletops from a cozy 24x24" square to an expansive 60" round, and easily coordinate with existing décor. Chrome and powder-coat finishes in a variety of colors allow these bases to fit in wherever they are invited.

Both the disk and X-leg configurations include adjustable thermoplastic glides for additional stability on uneven floors, and the high-quality steel and cast aluminum materials provide durability that outlasts cast iron and closing time.

Disk Pedestal - is .04" thick steel with welded reinforcement. Column is 4.0" diameter. No tools necessary for glide adjustment.

Tapered Pedestal - is .04" thick steel with a 3.0" diameter column. Black thermoplastic adjustable glides are included.

S-BASES

From start to finish Develop's S-Bases anticipate your needs. Extruded aluminum dual uprights give them a light look, but a sturdy feel. Polypropylene trim accents enhance the modern aesthetic, but take a back seat to function when wire management components are used with PowerUp® modules to bring power discreetly from floor to desktop.

T-legs showcase the bases' sleek design, but TT- and X-legs are also available to suit every table shape from rectangular and round to trapezoidal, boat-shaped, and crescent. Ganging devices allow you to create custom configurations of multiple tables for meeting spaces, while rolling bases give you the freedom to reconfigure at will.

S-Bases even anticipate your interest in the environment—at the end of their life cycle they can be easily disassembled into recyclable aluminum components.

D-BASES & F-BASES

Versatility is the hallmark of Develop's D and F series of bases.

Supporting a variety of different-sized tabletops, these series can be configured to meet any specification. Base options include single, double, triple, and hexagonal pedestals, each in several sizes. All feature cast aluminum legs, hub rings, and spiders along with seam-welded tubular columns and stringers for added strength and stability.

The D-Base design features a distinctive high-profile leg, and the F-Base is an unobtrusive low-profile leg. Both leg profiles are available in dozens of powder-coated epoxy finishes, but the low-profile F-Base is also available in polished chrome.

Minimalist low-profile legs are the focal point of the F-Bases. An optional accent stripe on the leg can be specified in dozens of colors to match your décor. Chrome and powder-coat finishes allow you to completely customize the look of this base.

D-Base - The stylish base of the high-profile leg is equipped with soft, rubber feet to help protect your floor.

F-Base - The low-profile leg may be specified with an optional accent stripe to enhance your specific style.

M-BASES

M-Bases offer a contemporary yet elegant look. The graceful base provides a clean line, which complements the elliptical upright.

Specify fixed or folding tables for conference rooms, training areas, dining, private offices, or for additional work space in an open-plan setting. This elegant base can be used in virtually any setting. M-Bases are the top of the line in tables. These distinctive bases can be finished in a number of powder-coat finishes. Coordinating laminate tops complete the look.

Leg styles are available in T-leg, X-leg or TT-leg versions. The TT-leg designs add intriguing architectural elements. PowerUp® modules provide convenient power & data access to any of our Develop Table lines.

Tables can also be ganged together to form a number of different configurations.

Leg Style - The M-Base's contemporary leg style comes in a T, TT or X-leg configuration.
